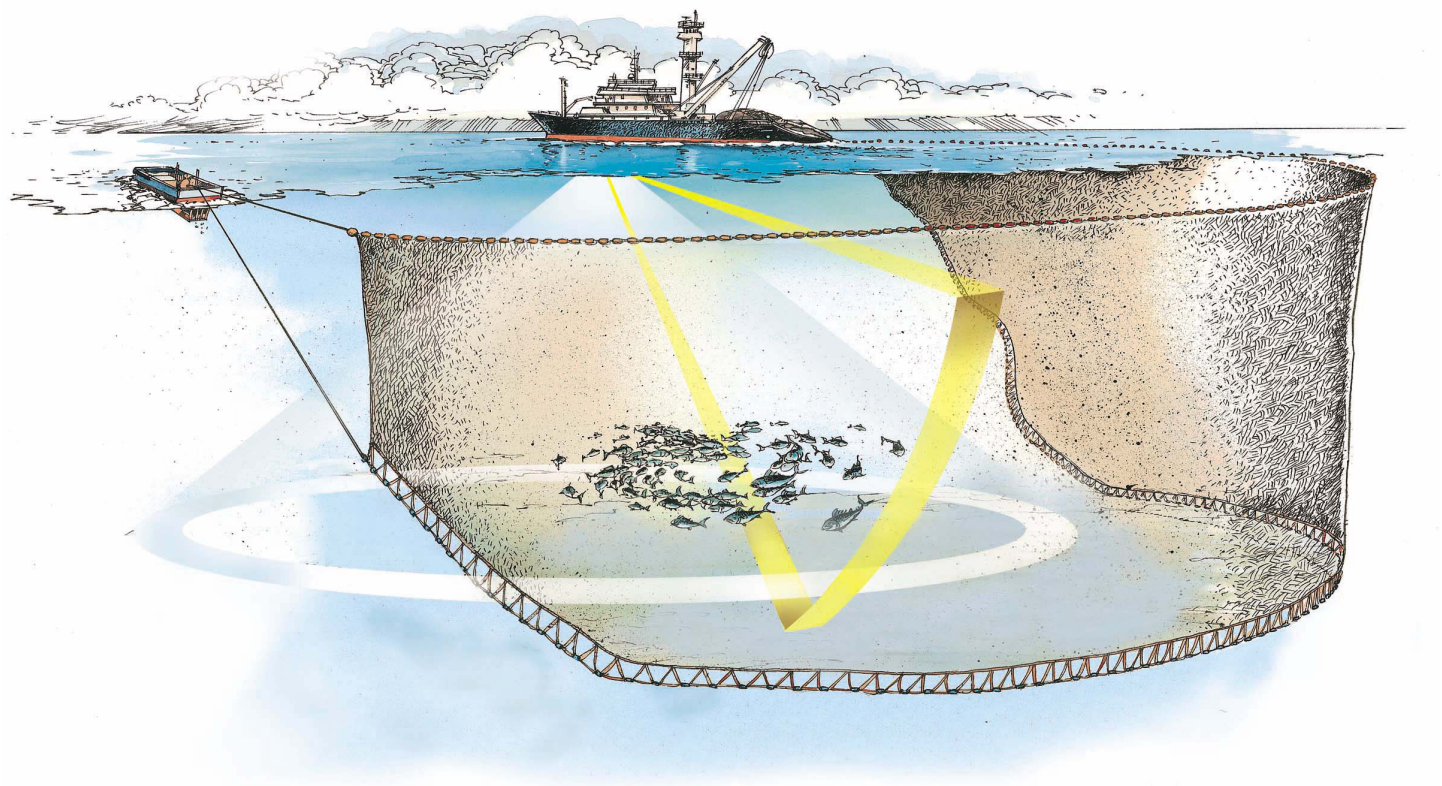
Software release note
Simrad SX90 SW 2.1.10



Introduction

This document describes the software and other changes introduced with the following new software versions:

- SX90 SW **2.1.10**

This software controls all functionality in the Simrad SX90 sonar. This includes transmission and reception, beamforming, interfaces with external peripherals and sensors, and all user interface (sonar presentations and menus).

Software changes

This software update solves a number of software bugs that have been reported by our users, or detected during out own product testing. The following new functionality is added:

- Added range 4.000 m
- Added range 4.500 m
- Added range 10.000 m

Documentation changes

No changes have been made to the end user documentation.

The reference manual is provided as context sensitive online help on the product. It is also available as a separate website for online access to the information. Note that all documents can be downloaded from the product website: www.simrad.com/sx90

Do I need to upgrade?

This is an important software update, and we recommend that you upgrade your sonar system.

As a general rule, we always recommend that the latest software version is used on our products.

How to do the update

End users are not permitted to do this software update. Contact your local dealer for help.
